AI-based Polygraphs

Scientific assumption

- „Specific lie response“

Machine learning

- data = video and voice recordings
- probability of true positive : 85-95 %
- data bias
- black box

AI-based Polygraphs and judicial conviction

Reliability

data bias

Explainability

Blackbox effect

Perspectives – opacity and AI use cases?

Ruling on the PNR Directive:

“It is important to add that use of such technology would be liable to render redundant the individual review of positive matches and monitoring of lawfulness [...] given the opacity which characterises the way in which artificial intelligence technology works, it might be impossible to understand the reason why a given program arrived at a positive match. In those circumstances, use of such technology may deprive the data subjects also of their right to an effective judicial remedy enshrined in Article 47 of the Charter [...].

European Court of Justice, C-817/19, June 21, 2022

Article 13 (proposal of the AI Act, 8115/21) – Transparency and provision of information to deployers

1. High-risk AI systems shall be designed and developed in such a way to ensure that their operation is sufficiently transparent to enable deployers to interpret the system’s output and use it appropriately. [...]
