

Judiciary Investigations on the AI Era

Daniel Camara – daniel.camara@gendarmerie.interieur.gouv.fr

Objective of the presentation

- Introduce some present and possible uses of AI for investigative tasks

Objective of the presentation

FIRST POINT to pay attention:

- The problems of law enforcement agencies are not technological but human.
- We are not capable of treating the existing volume of data available!

Objective of the presentation

FIR... attention:

- “Before, It was hard to find clues; today is hard to discriminate what is important and what is not! Too much data is available!!!”
-

volume of data available -- GN investigator

AI declaration

CHARTRE IA AU SEIN DE LA GENDARMERIE NATIONALE

Pour une IA de confiance au service
de la sécurité

LOYAUTE

La gendarmerie s'engage à faire évoluer les systèmes d'IA afin de conserver un niveau de performance élevé et une utilisation intègre.

CONNAISSANCE

La gendarmerie s'engage à développer la connaissance en IA pour prévenir l'effet boîte noire.

RESPECT

La gendarmerie s'engage à une exploitation de l'IA respectueuse des données à caractère personnel et garante des libertés individuelles.

RESPONSABILITE

La gendarmerie s'engage à utiliser l'IA dans un cadre d'aide à la décision et non en lieu et place d'une décision humaine.

CONFIANCE

La gendarmerie s'engage dans l'utilisation d'une IA de confiance au profit du citoyen comme de son personnel.

TRANSPARENCE

La gendarmerie s'engage à rendre disponible les méthodes comme les évaluations des systèmes employés.

Generic model

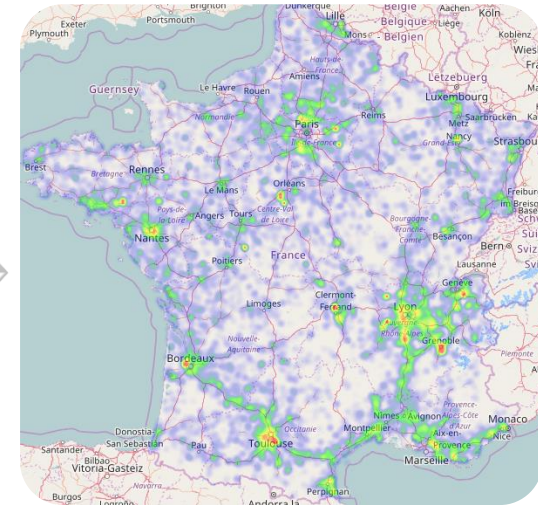

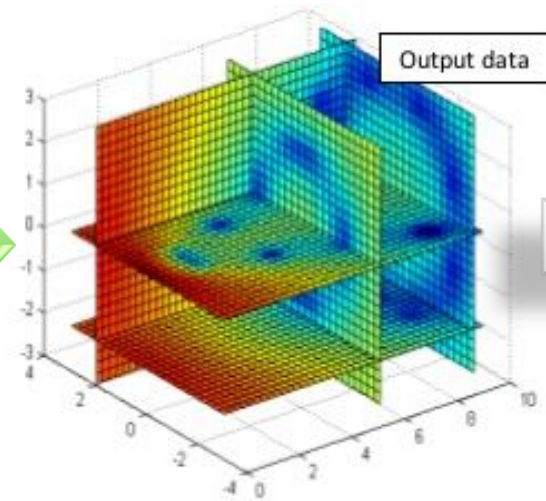

Inputs

Historical data

Mathematical model

Forecast

-  GPS
-  Accidents
-  Criminality
-  Weather
-  Events
- ...

Some Important concepts

- Error
 - Inherently linked to the methods
 - A model of the reality, by definition, is not THE reality! (probabilities)
- Bias
 - “Bias is inherently bad and should be eliminated!”
 - No, Bias is inherent in all data. Current AI works on FINDING bias in data
- Explainability
 - Be able to explain HOW the method works and reaches the results. Extremely important in a legal framework
 - How does our brain work? And the other person in front of you?
 - Aren't we being MORE demanding from AI than we are from humans?
 - Some advanced AI models, today act as "black boxes". BUT are not less interesting!
 - Efforts towards explainable AI are crucial but should we wait for that?

Prompt: Please create an image that expresses the main concepts of machine learning. Use the style that you think could fit the best for a nice visual effect. - DALL-E 3 by OpenAI.

Some Important concepts

- Error
 - Inherently linked to the methods
 - A model of the reality, by definition, is not THE reality! (probabilities)
- Bias

Prompt: Please create an image that expresses the main concepts of machine learning. Use the style that you think could fit the best for a nice visual effect. - DALL-E 3 by OpenAI.

However, we know, humans are never wrong, they do not commit errors!!!!

- How does our brain work? And the other person in front of you?
- Aren't we being MORE demanding from AI than we are from humans?
- Some advanced AI models, today act as "black boxes". BUT are not less interesting!
- Efforts towards explainable AI are crucial but should we wait for that?

AI and the intelligence cycle

Example of activities that could benefit from AI data treatment -- The intelligence cycle

The good information at the perfect timing

- Adaptive alerts 
- Suggestion of diffusion channels 

Provide high level correlation of multidimensional data

- Big Data visualisation 
- Correlation between data 

Opportunities and dangers

- Increase the capacity and decrease the time of action
- Amazing opportunities for improving and perfecting services
- The technology is agnostic
 - It does not distinguish usages

The same methods that can be used for creating spotless documents -> undetectable phishing mail

Opportunities and dangers

"Régine Bénédicte Helve", 13 years old, closeup selfie,

awkward

awkward framing

unattractive

boring

Put the girl out of the studio

made some faces less realistic?

Childlike

camera roll

image gallery

taken by a child

Uses in production - Gendarmerie

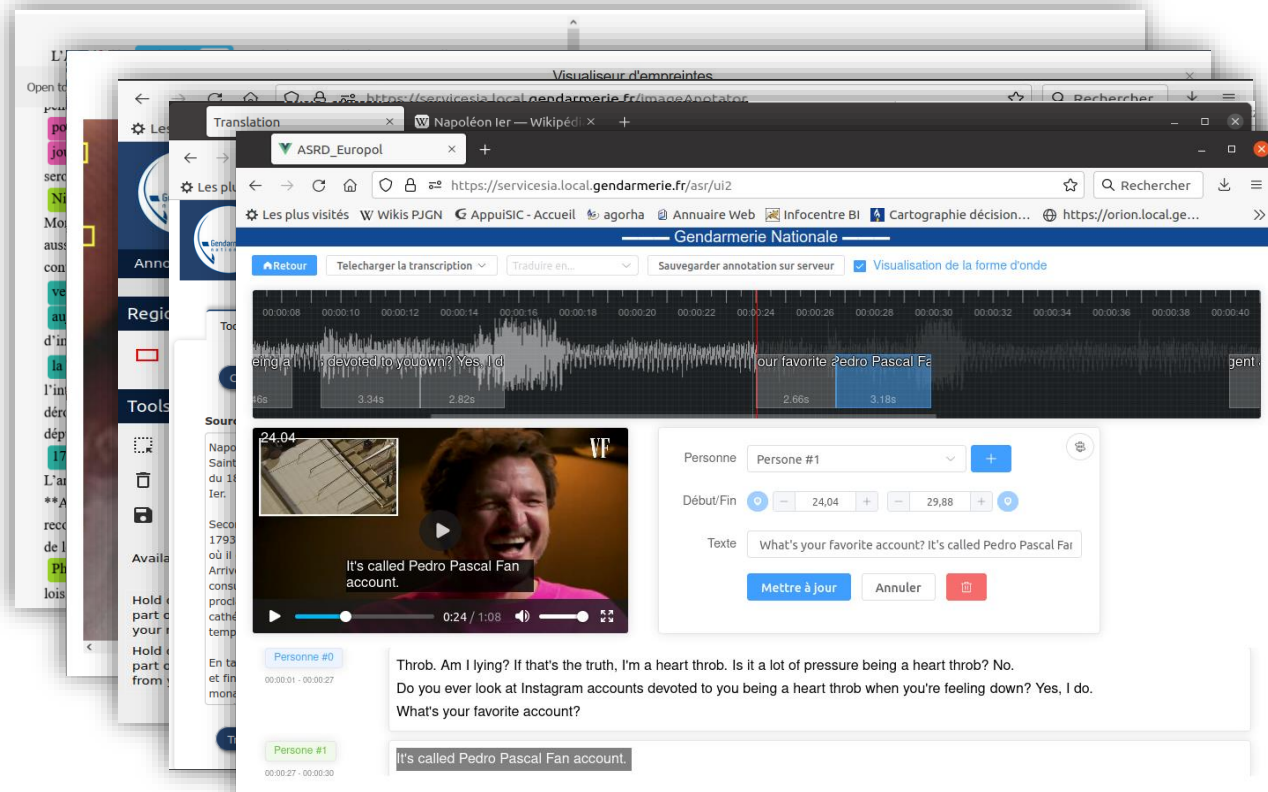

- ValidIA
 - Verification of the viability of genetic samples
 - Accuracy of 99.16%
 - Decrease the time of treatment for 86 samples from 3:30 hours to 30 min
- TAJ – National Database of Criminal Records
 - Fingerprinting identification
 - Facial comparison
- Speech to text
 - Transcription of auditions
 - Decrease the time of treatment from 8 hours to 1:30 hour

Present available for usage

- Some of the tools we have developed

Present available for usage

- Some of the tools we have developed

Great fear and source of distress for LEAs personnel

- Are we allowed to use it in the judicial context?
- Will this usage fragilise/invalidate my investigation?
- To what extent can I go?
- Sure I can use, but I will never declare I did!

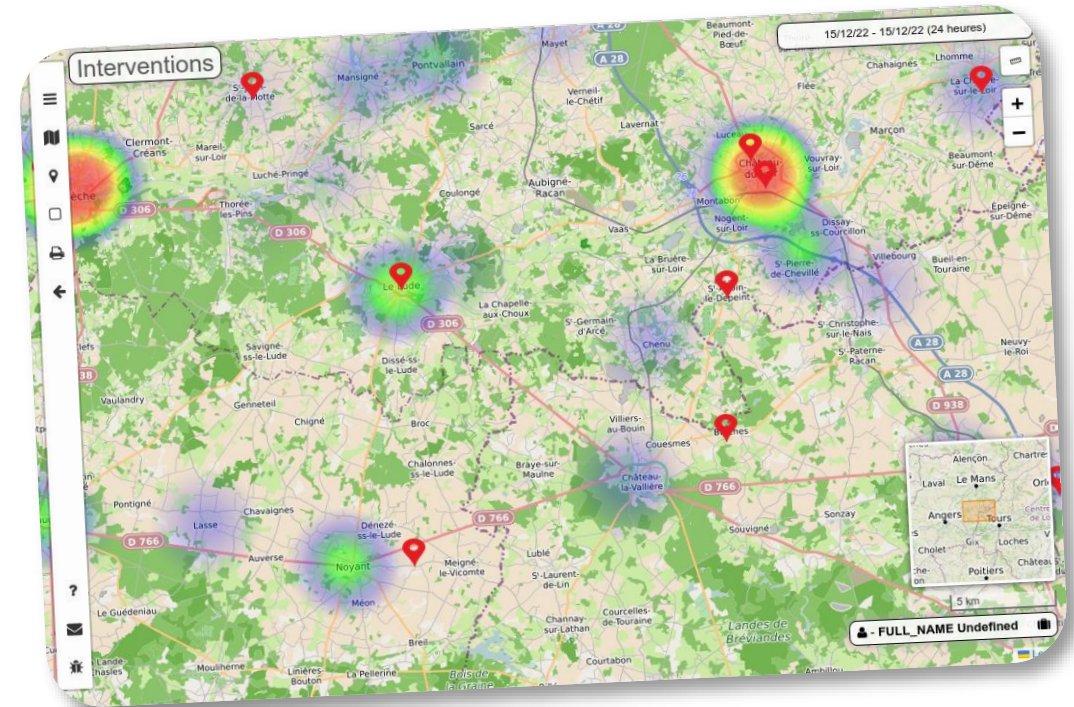

Are not the same kind of fears we had with the advent of computers?

Criminality forecast

- Usual Comments
 - I am quite suspicious of it!
 - Did not work in the USA!
 - The past is not enough to predict the future
- Preventive Analysis of criminality
 - Time series analysis methods
 - Probability, not crystal ball
 - Performance of > 80%
 - In experimentation

Directions

- Generative Models
 - Whole new paradigm
 - Comparable to the advent of the Internet
 - Can be used as programming tools
 - Still underestimated

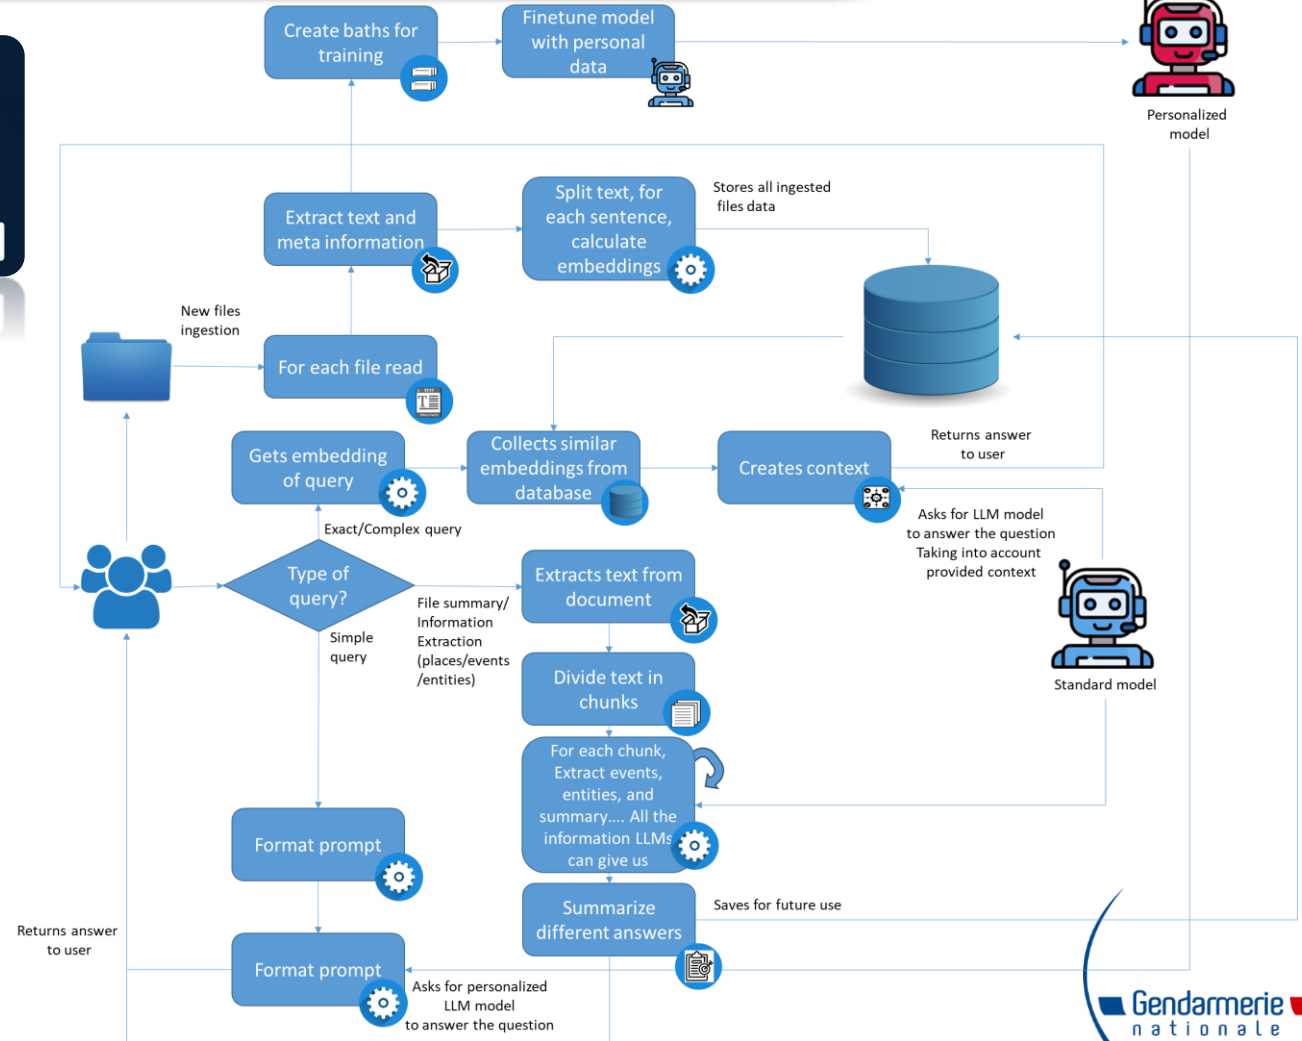

Prompt: Create an image contrasting traditional media with the internet age, highlighting the change in power dynamics and content quantity. Depict a small-scale publisher's office with limited media, books, and paper, symbolising controlled information dissemination. Contrast this with the internet era, showing a vast array of diverse individuals using digital devices, laptops, phones, and tablets, surrounded by an abundance of varied content and social media icons, representing content democratisation and a massive increase in information. The color scheme should distinctively separate these eras, emphasizing the internet's transformative effect on content quantity and distribution - DALL-E 2 by OpenAI.

On going projects

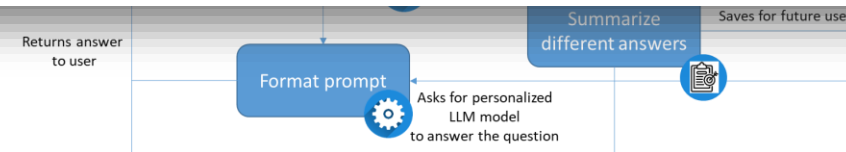

- IDeXtend
- Retrieval Augmented Generation (RAG)
 - LLMs are quite bad with specific and precise answers
- Objective
 - Create an auxiliar for experts and investigators to help them explore and understand their data
 - Old term, Expert System

On going projects

- IDeX
- Retrieval
- Generation
- LLM
- pre
- Objective
- Create
- investment
- understanding
- Old term, Expert System

Thank you for your attention!
